Notes on Field Contents

Under certain practices additional parallel forms of the access point, in a language other than that which is the valid form under the Language of Cataloguing specified in field 100, character positions 9-11, may be specially identified and carried in this block. For each parallel access point the language of the catalogue into which the access point fits is recorded in a $8 subfield.

These fields are also used to record alternate script representations of the 2-- record authorized access point when another record exists for the alternative script access point and its reference structure. For an alternative script access point, a $7 subfield is added to the 7-- field. (A $6 subfield is not required since all access points in 7-- fields link to the access point in the 2-- field by definition.) The fields in this block are repeatable to accommodate multiple access points.

The subfields in the 7-- block have the same definitions and specification as the equivalent subfields in the 2-- block, therefore these specifications are not repeated in the field descriptions below.

For general discussion of these types of data see section 6.7.

The use of the control subfields is described in a special section immediately preceding the 2-- AUTHORIZED ACCESS POINT BLOCK description.
